Why a Mr. Pergola?

Imagine family dinners, poolside afternoons and outdoor gatherings, protected under a purpose-built pergola that looks great and lasts a lifetime!

Peace of Mind in Every Storm:

Our pergolas aren't just stylish. They are tested to handle winds of up to 160mph* meeting ASCE 7-16 Standards. From Florida's hurricanes to northern snow, our pergolas stand strong.

*(160 mph when columns are up to 16ft apart, or 140mph when they are up to 20ft apart)

CLASSIC PERGOLA WITH MOTORIZED SCREENS

STANDARD AND CUSTOM SIZES

Mr. Pergola structures are engineered to meet the rigorous requirements of **ASCE 7-16**, including wind loads up to **160 mph***. Our **standard modules** are available in 2-foot increments, ranging from **10'x10' up to 20'x20'**, all supported by only four structural columns. We can create a 32'x16' pergola with only 6 columns as well. This level of span efficiency is achieved through the use of **high-grade, heavy-gauge aluminum alloys**—a performance benchmark unmatched in the industry.

Our columns and beams are manufactured from **6061-T6 structural aluminum**, recognized for its exceptional strength and load-bearing capacity. The adjustable louvres are extruded from

6063-T6 aluminum, optimized for precision fit and corrosion resistance. This material selection ensures structural integrity, durability, and long-term performance even under extreme weather conditions.

Beyond standard configurations, our engineering flexibility allows for **custom applications** such as **L-shaped pergolas**, **extended 4-foot louvre projections** for poolside bars, and tailored layouts designed to maximize coverage without compromising compliance. These advanced capabilities are a direct result of our materials, engineering standards, and adherence to ASCE 7-16 design principles.

*Ask for limitation

Models & Styles

At **Mr. Pergola**, we offer two engineered solutions for outdoor living: the **Classic Pergola** and the **Modern-Integrated Pergola**. Both are built with **architectural-grade aluminum**, designed to meet **North American building standards** and withstand extreme conditions (ASCE 7-16)

MODERN INTEGRATED PERGOLA

- SLEEK, MINIMAL PROFILE WITH INTEGRATED GUTTERS CONCEALED IN THE FRAME
- WATER IS DIRECTED INTERNALLY THROUGH THE COLUMNS FOR EFFICIENT DRAINAGE
- BUILT EXCLUSIVELY IN RECTANGULAR OR SQUARE LAYOUTS FOR MAXIMUM PERFORMANCE OF THE INTEGRATED SYSTEM
- LOW-MAINTENANCE SOLUTION FOR HOMEOWNERS SEEKING A CLEAN, MODERN APPEARANCE

HIGHLY CUSTOMIZABLE CLASSIC PERGOLA

- TIMELESS, PROVEN DESIGN RECOGNIZED ACROSS THE INDUSTRY
- HIGH LEVEL OF CUSTOMIZATION: DIMENSIONS, ORIENTATION, AND LOUVER CONTROL

- ADJUSTABLE LOUVERS ALLOW FOR PRECISE WATER MANAGEMENT: MOST OWNERS DIRECT RUNOFF FORWARD, PRODUCING A CONTROLLED WATERFALL EFFECT
- ENGINEERED FOR FLEXIBILITY IN INSTALLATION AND ADAPTABILITY TO DIFFERENT SPACES

Both pergola styles are **smart investments** designed for structural integrity, weather performance, and low maintenance. They provide one of the highest **returns on investment** by increasing property value, durability, and homeowner satisfaction.

Accessories and Screens

Enhance your outdoor living space with **Mr. Pergola's** range of smart accessories and enclosure options.

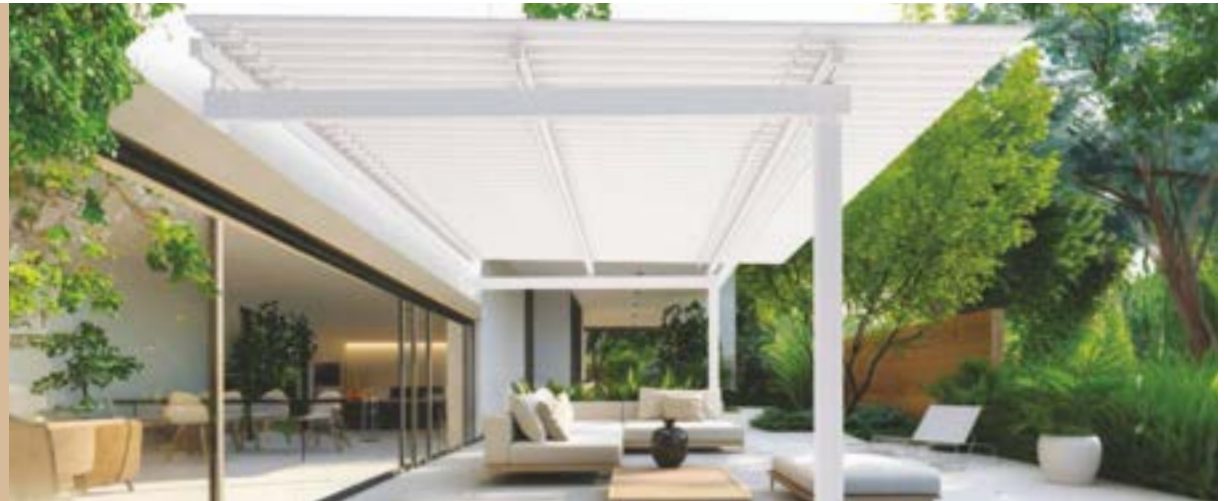

From cost-effective **mosquito curtains and privacy screens to stylish clip on table, flower-pot, swing and hammock attachments, privacy slats or LEDs**, every detail is designed to elevate comfort and versatility.

Because a **Mr. Pergola** isn't just built to look good — it's built to perform, season after season.
